

# Updating JRVCS105 (Pro)

- 1) Go to <https://in-command.net/>
- 2) Hover your cursor over Control Systems at the top of the page, select iN•Command Pro.
- 3) Hover your cursor over Software Downloads at the bottom of the page. Select **Display Commander** and **Body Control Module**, each file will download, make sure you do not change the file names, place the files within folders, or unzip the zipped file. Move the downloads to your flash drive - you'll need no less than 1GB of storage. You should have three files on your flash drive.
- 4) Insert the flash drive into the bottom of your iN•Command display.
- 5) Press the **Pages** button twice until you see icons across the top of the display.
- 6) Press the **Gear Wheel**, it will ask you for the Engineer's Passcode - it is **5391**.
- 7) You should see DC/BCM Version. To the right of each of these you'll see an **Update** button. You'll want to update the DC and BCM Versions one at a time. The updates will reboot the display to finalize the updates.

*If you see an error "Can't find firmware on USB disk!!!", the update files are not properly on the flash drive **or** the drive is corrupt.*
