

Updating NCSP3 and NCSP35

- 1) Go to <https://in-command.net/in-command-w-global-connect/>.
- 2) Scroll down and hover the mouse pointer over **Software Updates**.
- 3) Click on Display Commander and Body Control Module. Each file will download, make sure you do not change the file names, place them within folders, or unzip the zipped file. Move the downloads to your flash drive - you'll need no less than 1GB of storage.
- 4) Insert the flash drive into the bottom of your Display Commander.
- 5) On the Display Commander, select Settings.
- 6) Arrow down and select Software.
- 7) You should see DC/BCM Version. To the right of each, select the arrow. Now select Update in the top right corner. You'll want to update the DC and the BCM Versions one at a time. They'll have you reboot the display to finalize the updates.

*If you see an error "File Not Detected", the update files are not properly on the flash drive **or** the drive is corrupt.*
